

PORTFOLIO PROJECT

Digital sales workflow for heavy machinery.

PROJECT 5

RAKSAMESIN Heavy Equipment Marketplace

A Laravel-based marketplace concept that helps buyers discover verified heavy equipment while the admin team tracks inquiries, inspections, quotations, and deal follow-up in one structured workflow.

TYPE

Self-Initiated Portfolio Project

ROLE

Individual Project - Full-Stack Web Developer

STACK

Laravel / PHP / MySQL / Tailwind CSS / JavaScript

SUMMARY

RAKSAMESIN is a web-based heavy equipment marketplace for browsing verified machinery units, submitting purchase inquiries, and tracking buyer leads from inquiry to deal.

PROJECT TYPE

Self-initiated portfolio project based on a practical digital broker workflow for selling excavators, bulldozers, wheel loaders, and other project vehicles.

MY ROLE

This is an INDIVIDUAL PROJECT. I designed the database, built the Laravel backend, created authentication and roles, designed the public interface, and connected inquiries to lead management.

IMPACT

The project turns scattered sales communication into one structured workflow for units, buyer leads, inspection schedules, and quotations.

WHAT I LEARNED

I learned to map a high-value sales process into database relationships, secure authentication, role permissions, audit logs, file handling, and responsive UI.
